

Mid-Sized Spreaders

14" conveyors for pickups, one-tons, flatbeds and dumps

1.6 to 6 yd
Gas or hydraulic

Reliable workhorses from 1.6 yards up to 6.0 yards, these sanders are perfect for driveways, parking lots, private roads and developments. Designed for heavy use by commercial operators, they feature replaceable conveyor chains and spinner assemblies for easy servicing and lower cost of ownership.

In-cab controls allow you to choke and start the engine, adjust the idle speed and start or stop the flow of materials. Available in painted or Type 304 stainless steel (will not rust, unlike Type 409 stainless).

In-cab control

Hopper lip includes a return for extra strength

Heavy duty 2-piece hinged top screen included as standard equipment

Briggs & Stratton commercial engine is standard; Honda available as an option. Or, substitute dual motor hydraulic drive.

Easy to mount and remove from your truck with quick connect wire harness (included) and four 5000# nylon webs & ratchets (optional)

Scissor hinge on engine housing — won't rust like continuous hinges

Plenty of side gussets to reinforce and strengthen the hopper — 3 per side on 8' and 9' models; 4 per side on 10' units

Internal baffles control the spread pattern — even for parking lots; heavy on the left for roadways. Baffles adjust easily without tools. Spread pattern adjusts from 4' to 30'.

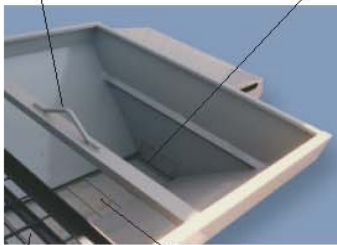

Continuous seam welds on all painted models — some brands use skip welds

Ball bearings with grease fittings on all shafts instead of less reliable bushings. Large 1 1/2" shafts on both drive and idler ends of the sander

Adjustable feed gate allows you to control the flow of material — light for snow, heavy for ice or trouble spots

Lifting bar, for sander removal at end of season, serves as a side reinforcement

10 gauge bottom wear plate holds conveyor rigid

Pitched hoppers on 3 yard and larger sanders have 2 screens

Optional chute extension drops spinner 12" perfect for dump bodies

Optional flip chute detaches by taking out 2 pins. Tow a trailer while the sander is on your truck. Great for emptying the hopper, and off-season storage.

Cleaning pad minimizes material deposits in pickup bed

14" conveyor chain with cross bars every 5" (every third chain link) for a steady, sure flow of material

Note: Features and specifications subject to change
